Paging / Public Address System

The Health & Safety Act 2015 takes effect on April 4th 2016.

Can you communicate with your staff, students, any workers onsite and your volunteers in the event of a hazard or emergency?

- A stranger loitering around the school buildings
- A stray dog in the playground
- An earthquake, fire or tornado

Give yourself and your Board of Trustees peace of mind. Be safe in the knowledge that any member of staff can alert students and fellow workers at the push of a button.

Audio over IP technology means that paging systems can be easily installed into schools without necessitating the expensive installation of audio cabling. Instead the audio signal is transmitted over the LAN / WAN.

Schools can send audio to the whole school or designated zones at the click of a button:

- Scheduled messages or alerts (using a sound of your choosing)
- Live announcements
- Pre-recorded emergency procedures via a "panic button" on any networked device

Sound equipment installed on your existing network

Quick and easy installation
Integrates with your VOIP phones to make announcements
Scheduler built in for bells and announcements
Audio over IP

2N® NetSpeaker Audio System: contact us to tailor a solution for you, utilising any existing infrastructure or visit our FAQ page

A note on funding: if you are rebuilding or renovating an IP audio paging system can be included under Priority 3. If your school has a very high risk profile you will need to speak to your regional property manager to discuss funding under Priority 1 or 2.
